Theonetrust.in: Complete Corrected Website Plan

Prepared 29 October 2026. This merges your PROJECT_SPEC and database note with your new core requirements and the tax research. It is a build plan, not legal or tax advice. Every `[CONFIRM]` item needs verified trust documents or your CA before launch.

1. Corrected mission and scope

Theonetrust.in is a trust-owned website to **help poor families and helpless people of all kinds**, not only teenagers. It has three jobs:

1. **Receive donations** from ₹1, by UPI QR, card and netbanking, with optional monthly autopay that the donor agrees to.
2. **Receive help requests** through an easy "Get Help" form, including requests made for someone else.
3. **Show transparency**: verified trust facts, dated updates and downloadable documents.

The public site stays one long bilingual (Tamil and English) landing page, plus focused utility routes: `/donate`, `/receipt/:token`, `/manage/:token` (autopay), and `/admin/*`. Payments, receipts, tax records and the database stay behind a separate API so a future donation platform can reuse them.

Non-negotiables carried over from the spec: the browser redirect or a QR scan is never proof of payment; amounts are integer paise; nothing is invented (registrations, statistics, stories, impact figures); beneficiary dignity and consent come first.

2. What changed from the original spec

Topic	Original spec	Corrected decision
Mission	Teenagers and families	All poor and helpless people, within the trust deed's objects `[CONFIRM]`
Support form	Minimal contact form, "not an application"	Guided multi-step Get Help form with a "help someone else" mode and a case inbox

Topic	Original spec	Corrected decision
Autopay	Not covered	Monthly giving via Razorpay Subscriptions / UPI AutoPay, with consent and one-click cancel
Minimum amount	Not specified	₹1 allowed; optional "cover the fee" tick
Receipt	Every verified payment	Optional acknowledgement from a configurable threshold (default ₹500), free download link or email
Tax	Receipt vs statutory certificate kept separate	Same, plus a tax-benefit opt-in, a Form 113 export, and an identity record for every donor
Animation	Small transitions only	Elegant scroll reveals and transitions, with reduced-motion support
Graph of pages and data	Mermaid architecture graph	Site and data maps in section 14
Harness	Full set of agents and skills	Lean version first (section 13)

3. Stack and cost

Layer	Choice	Cost note
Frontend	React + TypeScript + Vite + React Router; CSS tokens; Framer Motion or CSS for animation	Hosting on Cloudflare Pages or Vercel free tier (verify current limits)
API	Node.js + TypeScript with Fastify	The one place you may pay a little: free tiers often sleep when idle, which slows the first payment verification
Database	Neon PostgreSQL (pooled `DATABASE_URL`, direct `DIRECT_URL`); Supabase PostgreSQL as fallback	Free tier; follow your database-provider-switch note

Layer	Choice	Cost note
ORM	Prisma, pinned major version	Free
Payments	Razorpay (UPI QR, cards, netbanking, Subscriptions)	No setup fee, per-transaction fees apply; verify current pricing
Email	Resend or Brevo behind an adapter	Free tiers exist; verify limits
Receipts	PDF generated on demand	No file storage cost
Tests	Vitest, API integration tests, Playwright	Free

Why Razorpay, not Stripe: an Indian trust taking INR with UPI QR and UPI AutoPay is the natural fit for Razorpay. Stripe's India availability and UPI support are limited; confirm on their site if you want to compare.

Google Sheets may be used only for optional reports. It is never the system of record for donations.

4. Public landing page (section order)

Each section gets a calm, classy design and purposeful animation. Use scroll-triggered reveals, gentle hover and focus states, count-up numbers only for verified figures, and a smooth language switch that keeps the donor's chosen amount. Respect `prefers-reduced-motion`. Avoid heavy effects that slow phones.

1. **Header:** logo and legal name, anchors (About, Ways we help, Impact, Transparency, Contact), தமிழ் / English switch, and two distinct buttons: **Donate** and **Get Help**.
2. **Hero:** a human headline about helping people in need, one short paragraph about the real scope, primary CTA Donate, secondary CTA Get Help. Use approved real photos or a respectful typographic hero. Never invent urgency, counts or deadlines.
3. **Trust facts strip:** legal name, registration details, year, contact, and tax-approval status only when evidence confirms it. Hide unknown fields rather than showing placeholders.
4. **Ways we help:** education, food and essentials, health access, emergency support, livelihood, other trust-approved help `[CONFIRM list]`. Each card says who it is for, whether donations are general or earmarked, and passes the selected area into the donation form.

5. **How a donation helps:** illustrative examples only when the trust can verify costs; say how administrative costs and unallocated funds are handled.
6. **How it works:** choose a need, choose an amount, pay, get acknowledgement and updates.
7. **Impact and stories:** metrics need a source, period and date; stories need documented consent; minors stay anonymous. If there is nothing verified, show a factual statement of current activity instead of zeros.
8. **Transparency centre:** registration proof the trust approves for publishing, approval evidence if applicable, annual and audit reports, allocation and privacy policies, safeguarding policy.
9. **FAQ:** donation use, earmarking, pending or failed payments, receipt timing, tax benefit (honest about actual status), how to request help, data use, reporting a concern.
10. **Contact:** verified phone, email, address, WhatsApp link.
11. **Footer:** legal name, particulars, privacy, terms, refund and correction policy, receipt help, transparency documents.

Accessibility target is WCAG 2.2 AA. Test Tamil fonts and line wrapping early, at 360, 390, 768, 1366 and 1440 pixel widths.

5. Get Help form and case inbox

The form (a guided wizard, big touch targets, Tamil and English)

1. **Who needs help?** Myself / Someone I know / I am helping on behalf of someone.
2. **What kind of help?** Large icon cards: education, food and essentials, health, emergency, livelihood, other, and "I don't know how to explain".
3. **Short description** in Tamil or English. Optional, short, no sensitive financial or medical documents.
4. **Contact:** phone or WhatsApp, preferred language and best time to call. For "someone I know", the helper's contact plus the person's name or village if they are comfortable sharing it.
5. **Consent and submit:** privacy notice, consent that the trust may contact the person, and for third-party requests a confirmation that the helper believes the person agrees or cannot ask for themselves. The result page shows a reference ID and "we will call you".

For people who cannot fill a form

- A one-field **Call me back** button that needs only a phone number.
- A WhatsApp click-to-chat link and a phone number.
- Optional later: voice note (only after storage and safeguarding rules are decided).

Copy and safeguarding rules

- Say clearly: "Submitting this form does not guarantee help."
- Do not collect medical records, income proof, Aadhaar or photos in the first form. If evidence is needed, the trust collects it through a separate, access-controlled follow-up.
- Protect minors and vulnerable people: no public display of names, exact locations or stories without documented consent.
- Add anti-spam (rate limits, honeypot, optional CAPTCHA) and server-side validation.

Admin case inbox

Statuses: New, Contacted, Verifying, Helping, Closed. Owner notes (private), assigned follower, reminder dates, filters by help type and language, and CSV export with masked personal data. Every status change writes to the audit log.

6. Donation experience

Flow

Landing page → choose need (or general) → choose amount → name and contact (private record) → optional receipt and tax options → Razorpay Checkout (UPI QR or app, card, netbanking) → server verification → success page with receipt link only after verified payment, otherwise "Pending verification" with a safe re-check.

Rules

- **Amounts:** from ₹1; quick-pick buttons plus a custom amount. Validate on the server and store integer paise.
- **Fee note:** gateway fees can exceed a ₹1 gift. Offer an optional "cover the processing fee" tick; never force it.

- **QR:** prefer order-linked Razorpay Checkout with its own UPI QR so every payment ties to a donation intent. A static UPI QR is manual reconciliation only, and a donor-entered UTR or screenshot never marks a donation as paid.
- **Autopay (monthly giving):** a Razorpay Subscriptions / UPI AutoPay option. Requires enablement on the trust's account `[CONFIRM]`. Show a clear consent screen (amount, frequency, how to cancel). Give the donor a tokenised manage link by email or SMS to pause or cancel with no login. Every successful charge is its own payment record.
- **Anonymity:** "hide my name publicly" is separate from the private identity record the trust keeps.
- **Status model:** CREATED, PENDING, AUTHORIZED, PAID, FAILED, REFUND_PENDING, REFUNDED, MANUAL_REVIEW. Only a verified captured payment becomes PAID.
- **Foreign donations:** disabled at launch until the FCRA position, bank and gateway approval are verified.

7. Tax and compliance rules (from the research)

Plain answer: a donor does not violate tax by donating. The compliance risks are on the trust's side.

- **Law since 1 April 2026:** the Income-tax Act 2025 replaces the 1961 Act. Section 133 is the donor deduction (formerly 80G). Section 332 registers the trust as a Registered Non-Profit Organisation (RNPO); Section 354 approval is what makes donations deductible for donors. Existing 80G approvals stay valid for their approved period under transition rules `[CONFIRM with CA]`.
- **Donor benefit is limited:** under the default regime, most Chapter VIII deductions are unavailable, so many donors will not gain. Never promise a tax saving.
- **Cash limit:** the ₹2,000 cash restriction continues. The website takes only online payments; warn on offline cash entries.
- **Form 113 and Form 114:** the trust files a donations statement (Form 113) and gives donors a certificate (Form 114), both by 31 May after the financial year. Form 114 is generated on the e-filing portal after Form 113, using a CSV upload. A valid trust PAN is needed. The website PDF is an acknowledgement only, never Form 114.
- **Anonymous donations:** donations where the trust keeps no identity record (such as name and address) can be taxed at 30% above a threshold. So **record a name and contact for every donor**, and ask the CA what minimum identity record is enough.

- **85% rule, audit and ITR-7:** the RNPO must apply at least 85% of regular income to charitable purposes and complete the audit and return filings. The audit form name varies between sources (Form 112 vs the older 10B); the CA decides.
- **GST:** pure donations with no benefit in return are not a taxable supply, so add no GST to donations. Selling goods or merchandise for payment may attract GST.
- **Tamil Nadu:** no general Public Trusts Act was found; the registered deed at the Sub-Registrar is the operative step, and societies fall under the Tamil Nadu Societies Registration Act, 1975. No state-specific tax on donations was found `[CONFIRM with CA]`. Check that the trust deed's objects cover helping poor and helpless people of all types.

What this means in the product

- Settings: RNPO registration reference, Section 354 approval number, validity date, and a `taxBenefitEnabled` switch (default **off**).
- Every donation stores a private name and contact; address is asked only when the donor opts into a tax receipt.
- Tax opt-in appears only when `taxBenefitEnabled` is on. It explains the old-regime condition, states why PAN and address are needed, and keeps PAN out of URLs, emails and public receipt pages.
- Admin: financial-year (April to March, IST) **Form 113 CSV export** and a reminder for 31 May.
- Receipt wording is "Donation acknowledgement" until approval is confirmed. No GST fields on donations.

8. Receipts

- **Threshold:** an acknowledgement is offered when the verified amount meets a configurable minimum (default ₹500, setting `RECEIPT_MIN_PAISE`). Make it optional for the donor.
- **Delivery, at no cost to the donor:** a download link on the success page and an email to the address the donor supplies, only if they consent.
- **Rules:** created only after verified captured payment; one receipt number per payment; unguessable token (store only its hash); no PAN, phone, email or full address on the public view; PDF generated on demand from a versioned template.

- **Separate concept:** the statutory certificate (Form 114) is tracked in `tax_certificate_tracking` with states such as NOT_APPLICABLE, PENDING_TRUST_FILING, FORM_113_FILED, FORM_114_ISSUED and CORRECTION_REQUIRED. The site never claims to issue it.
- **Refunds and corrections:** keep the original record and add a correction record; never delete.
- **Owner notification:** queued, retryable email. Email failure never undoes a paid donation.

9. Data model

Carried over from the spec: `admin_users`, `programmes`, `donation_intents`, `payment_attempts`, `webhook_events`, `receipts`, `tax_certificate_tracking`, `notification_outbox`, `content_sections`, `impact_metrics`, `transparency_documents`, `audit_logs`.

Added for this plan:

Table	Purpose
`help_requests`	Reference ID, who needs help, help type, short description, contact, language, consent flags, status, assigned to
`help_request_notes`	Private owner notes and status history
`donation_subscriptions`	Provider subscription ID, intent link, amount, frequency, status, consent timestamp, manage-token hash
`donor_identity_records`	Private name, contact and optional address and PAN (encrypted), linked to the donation, with the anonymous-display flag
`trust_settings`	Legal name, RNPO and Section 354 details, validity date, `taxBenefitEnabled`, receipt threshold, owner email

Rules: UUIDs for internal IDs; amounts in paise; PostgreSQL-standard types only so Neon and Supabase remain interchangeable; all database access through backend repositories; never store card or UPI credentials.

10. API additions to the spec

Keep `/api/v1` and the spec's existing endpoints. Add:

- `POST /api/v1/help-requests` and `POST /api/v1/help-requests/callback` (phone-only call-me-back)
- `POST /api/v1/subscriptions`, `GET/POST /api/v1/subscriptions/manage/:token` (pause, cancel)
- Webhook handling for subscription charge events on the existing Razorpay webhook
- Admin: help-request list and detail, status change, notes; Form 113 CSV export by financial year; settings for tax profile and receipt threshold

All mutations validate input, rate-limit public endpoints, and write audit entries for admin actions.

11. Owner dashboard

Overview (verified totals, pending, failed, refunds), donations ledger with filters and CSV export, payment exceptions and reconciliation, receipts and resend, **help request inbox**, **monthly-giving subscriptions**, programmes and content, transparency documents, **tax and compliance page** (approval details, Form 113 export, 31 May reminder), settings, and append-only audit log. Owner-only at launch, with strong authentication and an authenticator-app second factor if supported.

12. Security and privacy gates

- Secrets only on the backend; never in `VITE_*`, Git, logs or screenshots.
- Verify checkout signatures and webhook signatures; make webhook processing idempotent; check amount, currency and order against trusted provider data.
- HttpOnly, Secure, SameSite cookies; CORS allowlist; CSRF protection where needed; rate limits on login, donation creation, forms and status lookups.
- Admin routes enforced on the API, not only hidden in the UI.
- Privacy notice stating purposes, required versus optional data, retention and contact path; confirm Indian data-protection obligations with counsel.
- Backups and a tested restore before launch.

13. Harness engineering (lean first version)

Use Claude Desktop's Code tab with the repository open, and start with this small set:

1. A root `CLAUDE.md` with the rules: read the spec first, change small focused patches, never invent facts, never edit secrets or production data without approval, one slice at a time, report files changed and tests run.
2. Two read-only reviewers: a **payment-security reviewer** and a **change auditor**.
3. A gate before every merge: lint, typecheck, unit tests, API tests and the critical payment tests.
4. Add UI-regression and accessibility reviewers, plus Playwright screenshots, once the public site is built.

14. Page and data maps

Donation path: Landing page → Donate → donation intent saved → Razorpay order → Checkout (UPI QR, card, autopay) → callback sent to API → signed webhook → verified PAID → receipt (if the amount meets the threshold) → email to donor and owner → admin ledger and Form 113 export.

Help path: Landing page → Get Help wizard or Call me back → help request saved → owner notified → admin case inbox → follow-up call → status updates.

Data links: donation intent → payment attempts → receipt → tax tracking; donation intent → donor identity record; subscription → many payment attempts; help request → notes; everything admin-side → audit log.

An interactive visual version of these maps can be built on request.

15. Build phases and gates

Phase	What you build	Gate before moving on
0. Facts	Legal name, registration, approvals, bank beneficiary, contacts, approved photos, owner email, receipt wording, help scope	Signed-off content and legal checklist; unknowns recorded as blockers

Phase	What you build	Gate before moving on
1. Design	Wireframes, tokens, Tamil typography test, animation plan, component states	Hero, donation panel, Get Help wizard, footer and admin shell approved
2. Public site	Landing page, bilingual content, Get Help front end, accessible navigation	Mobile, tablet and desktop checks in both languages; no placeholder facts
3. Backend	Database and migrations, env validation, admin auth, help-request API, audit log, admin inbox	Unauthorised API access denied; clean-database migration passes; no secrets in repo or bundle
4. Payments (sandbox)	Donation intent, Razorpay order, callback and webhook verification, state model, QR	Tests for success, cancel, failure, duplicate and delayed webhook, mismatch, bad signature; no live keys
5. Receipts and email	Receipt rules, PDF, link, outbox, admin resend	One receipt per payment; no personal data in public link
6. Autopay and tax	Subscriptions, manage link, tax opt-in, Form 113 export, tax settings	Razorpay and CA confirm what is enabled and allowed
7. Hardening and launch	Full tests, accessibility, backup restore, monitoring, live webhook test	No unresolved critical or high payment, security or accessibility issue

16. Items to confirm before launch

1. Does the trust already hold registration and donor-approval under the new Act (Sections 332 and 354), or are these still to be applied for? This decides whether the tax features go live at launch.
2. Exact legal name, trust deed objects and the final list of help types.
3. Whether Razorpay enables UPI AutoPay and Subscriptions for the trust's account.
4. The minimum donor identity record the CA wants kept for every donation.
5. The CA's confirmation of the audit form, filing dates and any Tamil Nadu requirements.
6. Photo, story and testimonial consent for every beneficiary shown.
7. FCRA position (foreign donations stay off until confirmed).
